

# Green Commitment

Infinity keeps a close eye on the environment throughout its manufacturing cycle.

This commitment is made up of a series of practical actions Infinity is proud to carry out:

- 100% of the raw waste produced is reused during the manufacturing process.
- 100% of the water used in the manufacturing process is purified and fully reused during the grinding process.
- 80% of the electrical energy consumed is produced by the Infinity factory.
- Infinity slabs are made entirely from natural, non-toxic materials, most of which come from local quarries, with significant benefits for the environment.
- Like all manufacturers belonging to Ceramics of Italy, Infinity voluntarily adheres to the BAT (Best Available Techniques) protocol.
- As attested to by the CCC protocol, Infinity has almost completely eliminated Zirconium Silicate throughout its range.

This means that choosing Infinity for your architecture projects not only guarantees quality and efficiency, but also takes a responsible, attentive stance regarding the future of our environment.
